

Appendix J: List of Current ICT Tertiary Degrees in Australia

The following is a list of ICT-related degrees found in Australian tertiary institutions. We analysed all institutions currently funded by the Australian Higher Education Funding Act, taken from <http://www.dest.gov.au/highered/ausunis.htm> (accessed 15th August 2002).

When compiling the list below, the decision on whether to include a degree or not is based on appraising whether the degree produces graduates *likely* to be qualified to work in the areas of CSE/CS/IS as given in the section 4.3. This appraisal may be subjective in some cases.

Note that as far as we know, the information below was complete and correct at the time when it was compiled. The data collection dates and sources are stated in the pages below. However, due to the constant changes to degree structures and to the information available on them, this list will likely become inaccurate in the short and medium-term future. As a matter of fact, in the one month between the time when the data was first collected to the time this report was written, the list was updated twice due to two institutions making significant changes to information on their course offerings.

The following list is sorted by institution names.
